Long-Term Available Transmission Capacity Management Tool Work Session

The BPA Reservation Desk has developed the Long Term Available Transfer Capability Tool (LTAMT) to more effectively and efficiently manage long term Available Transfer Capability (ATC) inventory. This automated solution replaces approximately 38 spreadsheets, previously used to calculate long term available flowgate (AFC) capability. Customer will see a slight shift in AFC inventory calculations as a result of standardizing the way the transmission service requests are modeled. ATC inventory calculation results are identical to the previous values. The new tool helps standardize our reservation processes by providing systematic and reproducible business results. We are excited to share the benefits of using the LTAMT with you. We will also be available to answer any general Transmission Reservation questions you may have. Please join us in person or by phone.

Where: One Park Place, Room 222, 7600 NE 41st Street, Vancouver, WA

When: January 17, 2013

Time: 9 a.m. - 10 a.m.

Phone Bridge: 360-418-8001 **Passcode:** 2144#

* To call in to the meeting dial 360-418-8001, and at any time during or after the message and the double beep, enter 2144 #.
