

# Commercially Equivalent Task Force

Short-term Competition Workshop  
January 9, 2013

# Commercially Equivalent Paths

# Commercially Equivalent Paths

- Test 1 - A valid commercially similar defender must have 67% of the significantly impacted FGs of the Challenger.
- Test 2 - A valid commercially similar defender must have 67% of the constrained FGs of the Challenger impacted by applying the 90% rule.
- 90% Rule - To relieve a constrained flowgate or path, a Defender's TDF must be at least 90 % of the Challenger's TDF. For MOD 028 and MOD 029, the TDFs are assumed to be either 0 or 1. For example, if the challenger TDF on a constrained element is 0.15, the defender must have an impact on the same constrained element with a TDF of 0.135 or greater.
- If Test 1 and Test 2 are both true, it passes the equivalency test.
- Identify the largest recall required from the flowgates that passed the 90% rule. Compute credits to all flowgates based upon that recall amount.
